

# WeDict Pro

User Guide

version 1.5

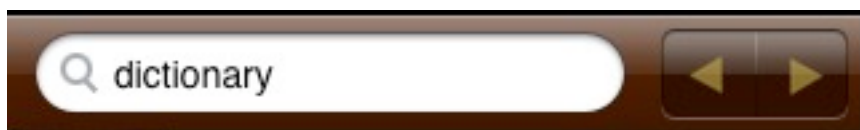

## What WeDict Pro is

The WeDict Pro for iPhone/iPod touch brings you a pocket dictionary with multi-language. This version uses same dictionary format with StarDict. An basic English-Chinese and the WordNet 2.0 English-English dictionary come with the application. The pro version is able to add more dictionaries by downloading from internet or uploading via wifi network.

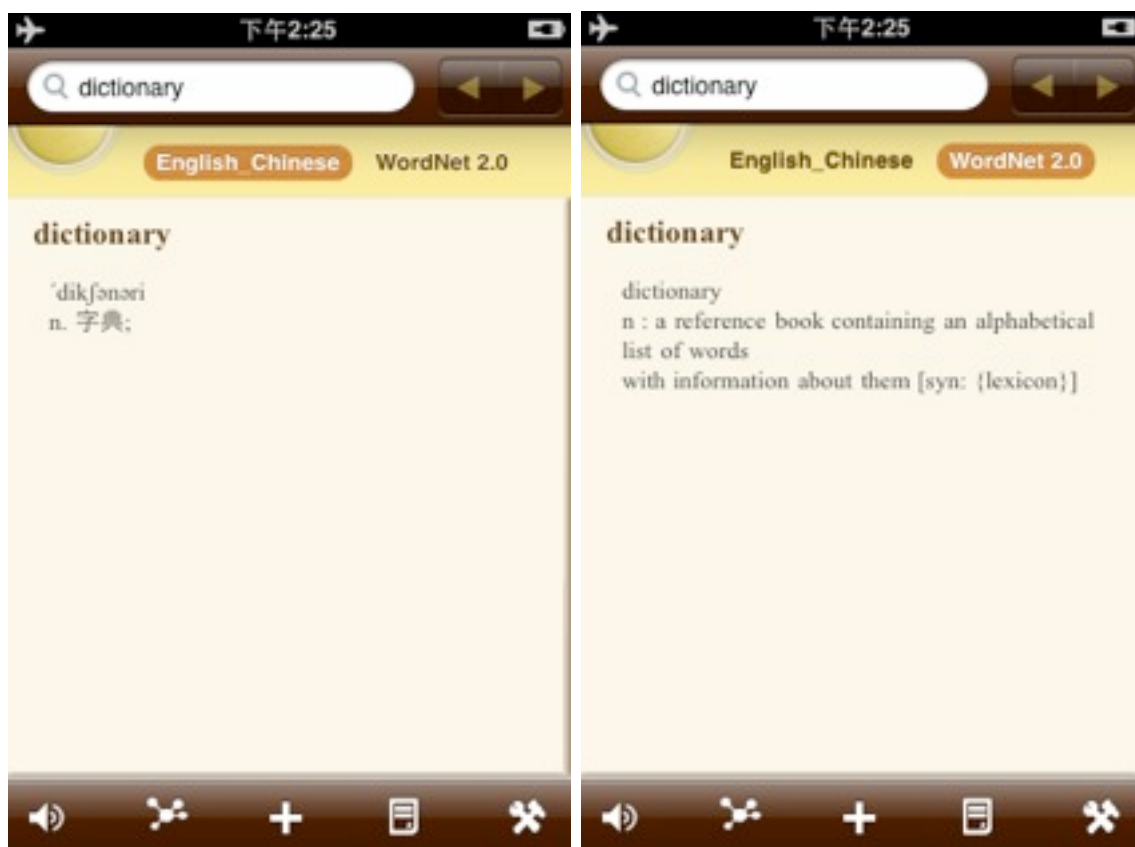

# Overview of the application

The top bar is the **search bar** for look up a word. You can always type word in and look it up. The top-right is **history button** where you can navigate between the search history.

The middle screen is the definition area which all the found result will be shown. The tab bar below the search bar will show all dictionaries which have the searching results. Click the dictionary display name to show the result. Drag the tab to scroll the tab to show all dictionaries.

Show/Hide suggested words.

Click one of the suggested word, the words list will hide.

## The bottom bar:

### pronounce the word

When the sound file of the word is available, the button will be enabled. Otherwise, the button is grey. Currently, only **English** words are available.

After v1.5, custom sound files are supported. To use custom sound files, go to settings, click dictionary and upload dictionaries, then turn FTP on. On pc or mac sides, upload the sound files to sound folder. (Wav and aif files are supported, Linear PCM and IMA/ADPCM (IMA4 audio))

### show the visual network of the word (see page 7 )

### add word to bookmark

You can bookmark word you want to return to later. When a word added, a clip will show on main content view to indicate the word is in bookmark list. Delete the added word from bookmark, the clip will be removed.

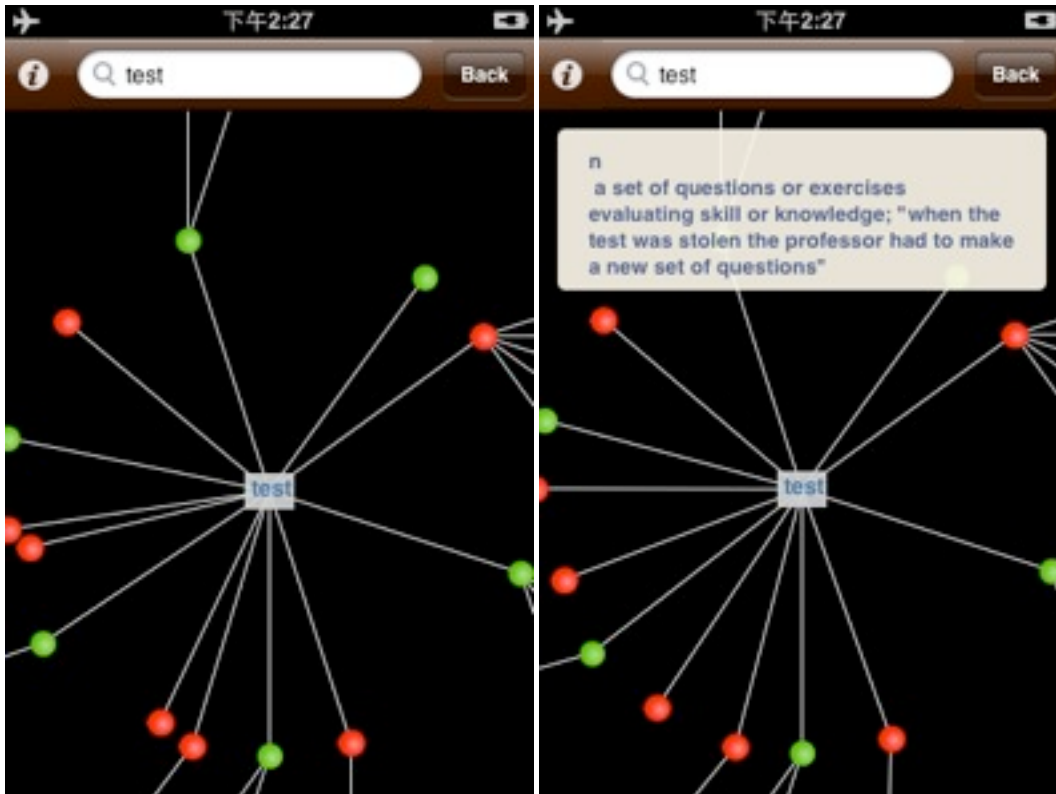

### show bookmarks list (see page 8)

### navigate to the settings screen (see page 9)

## Visual word network

The related words of the word can be shown in a visual interactive network.

Here is the different balls stand for:

- Tap the ball to show distinct concept
- Double tap word to show the network of the word
- Drag ball or text to move them
- Drag the background to pan around
- Double taps screen to center the network

## Bookmarks List

**Bookmark a word:** search the word and tap “+”. Then tap Add to bookmark.

**Search a bookmarked word:** click a word for the lists.

### Delete a bookmark or list:

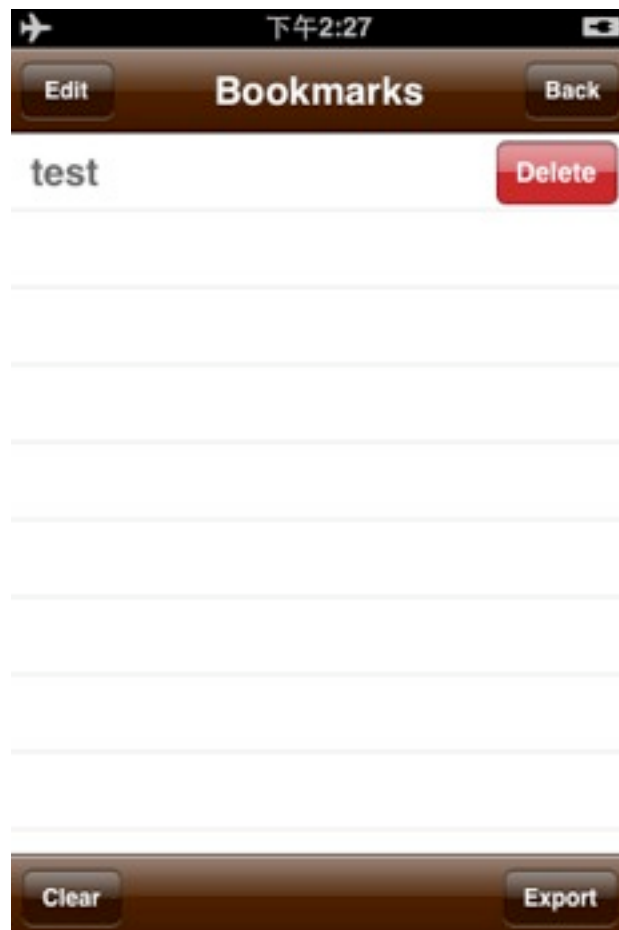

1. Tap the **edit** button then tap red circle, then tap Delete.
2. Swipe the word then tap delete.

**Clear all bookmarks:** Tap **clear** button on the bottom left corner.

### Export the bookmarks:

 Tap **export** button

- Save to file: the list will be save in documents. it can be downloaded using FTP client (see page 10 )
- Email: the list will be sent to the email you input. If you can not find the mail in you email inbox folder, please try look for it in spam folder. Some email server thinks the mail is a spam mail.

## The Settings screen

To get to the WeDict Pro settings screen, tap at the bottom bar.

At the very top of the settings screen is Options section with several buttons:

- **Text size:** change the text size
- **Export Word Only:** the option for export bookmarks. When this option is on, only the word will be exported. Or, a html file with full definitions of these words will be exported.
- **Tap to look up:** the option will turn on or off the “tap to look up” function.

The “Dictionary” section is the list of all dictionaries available.

**Edit dictionary:** Tap Edit. Then do one of the following:

- To rename a dictionary, tap the dictionary. Then an input window will pop up, enter the new name for the dictionary. Then name will show on the search result view.
- To delete a dictionary, tap , then tap Delete.
- To sort the dictionaries, drag .

**Check and uncheck a dictionary:**

If you don't want the application to look up word in one dictionary, uncheck the dictionary.

**Download dictionaries:** tap Download dictionaries, then do one of the following:

- Click one language folder and choose one dictionary. Tap Download to download this dictionary.
- Download from URL: tap Download from URL, then input the URL of the dictionary and click go. The dictionary should be a zip format file which including **dict** and **idx** file.

**Upload dictionaries:** tap Upload dictionaries, then click FTP. the ip address and port number will show up on screen. Go to your PC or Mac, using Filezilla (<http://filezilla-project.org/download.php?type=client>) or other ftp client to connect the iPhone. then upload dict and idx file. After uploading these files, click STOP to stop FTP server.

*\*When the FTP server is on, the saved bookmark list can be downloaded using the FTP client.*

The third section is Help section with several buttons:

- **Send Feedback:** start composing an email to the author
- **Online help:** see the online help document.
- **About:** see the about of the application.

## FAQ

**Q:What type of dictionary is supported?**

A: The Wedict pro use the same dictionary format as StarDict. A dictionary includes .dict and .idx files.

**Q:What are .dict and .idx files?**

A: .dict and .idx files are StarDict dictionary files.

**Q: Can i use .dict.dz and .idx files in WeDict Pro?**

A: No, you may need to rename .dict.dz to .dict.gz then unzip the file to get .dict file. (For windows user, using [7z](http://www.7-zip.org/) :<http://www.7-zip.org/>)

**Q:How to add dictionary to WeDict pro?**

A: you may use FTP client to upload dict and idx files to Wedict pro. (Local WiFi network required).

**Q: How to add custom sound files?**

A:Turn on FTP server on upload dictionaries sections, then upload wav or aif files to sound folder. (Linear PCM and IMA/ADPCM (IMA4 audio) are supported)

**Q:Where can i find a FTP Client?**

A: FileZilla <http://filezilla-project.org/download.php?type=client>
